

2017 WADE Into Research REU Application Form

You can type directly into the text boxes in this form and save your entries.

Name

Year in college

- ☒ 1st year
☐ 2nd year
☐ 3rd year
☐ 4th year

Gender

- ☐ Female
☒ Male

If you wish, you may identify yourself as a member of an underrepresented group here:

Describe any mathematical activities you have participated in not in the context of a class. (Study-abroad, math presentations, tutoring other students, college-level math competitions, activity on math.stackexchange.com, Project Euler, solving problems printed in math journals, etc.)

Have you participated in original research under the direction of a faculty member in the past? If so, please briefly describe.

Describe any experiences you have had with computer programming, or with using computers to do mathematics.

One of the main potential benefits of an REU is an opportunity to interact with other undergraduates that are very interested in mathematics. We want the REU to have a welcoming and supportive environment for all participants, and students will be working together in teams. Are you willing to be supportive of all of the participants (especially those that might not have as much coursework, background knowledge, computer experience, or mathematical writing experience as you)? What experience do you have effectively working in teams, and encouraging your teammates if and when they get discouraged?

Please list below the math courses you have taken beyond calculus. For each course, list the course title, the textbook title and author(s), the sections the course covered, and your grade in the course. Also list courses you are currently enrolled in.

[illegible]
